HEAD OFFICE AT HEILOO (HOLLAND)

*Heiloo, Holland, May 1951*

*Again we have pleasure in presenting you our 1951 bulb catalog with our best greetings and thanks to our many loyal Friends and Customers, old and new, in the U.S.A. for their past favors.*

We are glad to be able to report that, at this time of writing, our stocks look very promising for the new season assuring the same superior bulbs we have been producing already for so many years.

*In this catalog we have again added to the list of Daffodils and Tulips all of magic beauty and we hope they will be greeted with appetizing expectations to further the beauty of your Homes and Gardens and entering on the exhibition table at your Daffodil and Tulip Show.*

*As in the past the selection and packing of High Quality Bulbs, will be done with utmost care at our Nurseries in Heiloo, Holland and just as they are ready for shipment they will go forward to you in solid packing material. Our long experience holds a guarantee of satisfactory handling of your order, in this we feel to have a definite obligation.*

*We cannot recommend strongly enough to send in your order early, in order to avoid disappointment of depleted stocks etc. at a later date as orders will be filled in rotation.*

*Business organizations are going through a period of great financial readjustments. Economic developments have been such that the majority of all commodities have reluctantly had to be increased in price.*

*There has been practically no increase in prices of our bulbs and we have been able to reduce the prices on some of our newer varieties of Tulips and Daffodils.*

We sincerely hope that our friends and clients will appreciate our efforts in trying to maintain a price stability and we feel confident that you will take full advantage of these moderate quotations for the better bulbs and varieties.

We wish to acknowledge with cordial appreciation your renewed and continued interest in our products and the new suggestions that you offer us from time to time.

**Substitution.** In the ordinary course of business we do not substitute, as is so often done, without the authority from Customers. We therefore beg our Clients to inform, if they object to substituting other varieties, if not we shall always use our best knowledge and ability to send good varieties, of equal merit, usefulness and value. If we do substitute, we wish it to be distinctly understood, that we shall always give the name of the variety sent.

**Customers are invited to examine the goods on arrival** and to check the contents of their consignment. Paper bags should be opened, so as to allow fresh air to the bulbs, and those wanted for forcing should be kept in a particular cool place, until wanted for potting.

**Collective or group orders.** We strongly recommend our Customers to join with Friends or Neighbors to make up a group order. Horticultural Societies, Garden Clubs, Institutes, Schools etc. are advised to pool their orders and take full advantage of the case lots we offer at much reduced rates. The smaller boxes and parcels will be placed in one or more large cases and shipped to the sender of the order.

## We make a great Speciality of Tulips

**For Forcing.** They want the same soil and treatment as Hyacinths (see our cultural directions for Hyacinths) but it is necessary to plant the bulbs in pots, pans, boxes etc. as soon as possible after arrival. If, for some reason, there must be a delay, the Bulbs should be stored in a cool place with a constant temperature. We advise our Customers to mention it when Bulbs are required for forcing.

# Darwin Tulips

**(May-flowering)**

They are excellent for cutting, just at the time that the spring flowers are over and there is scarcity of flowers in the open ground. The cut flowers are beautiful for decoration in vases and last a long time in water. By gentle forcing they may be had in flower from the end of January and onwards. We have discarded a great many varieties, which we considered inferior to those offered now.

# Triumph Tulips

Before the war we have been reproached for not featuring these Tulips more strongly and to advertise more about their outstanding characteristics and merit. They are a new race of Tulips being a crossing between Single Early and Darwin Tulips and were raised by a Haarlem Nurseryman a good many years ago.

They are exceedingly valuable for the flower garden, in borders etc. on account of their strong stems, vigorous habit, wonderful colors. Triumph Tulips flower about 10 days later than Early Single T. thus bridging the gap between the early and late varieties nicely.

They will force all steadily and the substance of the flowers is superior.

# Mendel Tulips

A race of Tulips, raised by crossing Duc van Tholl and Darwin Tulips. This new family owes its particular value to the fact that it has contracted the glorious colors of the Darwin Tulips, as well as their vigorous habit. They are of the earliness of the Duc van Tholl family and can therefore be forced very easily, thus adding to their value considerably.

**Treatment for forcing.** Plant before the end of September in boxes, pans or pots in any rich garden soil and plunge in the ground on a cool spot where the temperature does not rise to over 50 degrees. They can be brought into the Greenhouse at the dates given to each variety listed, they should, however, then have obtained a height of 2½ to 3 inches (do not bring indoors before). They may at once be exposed to the full light contrary to all other Tulips which should be started in the dark. If for some unforeseen reason this height is not obtained and the bulbs are found to be lazy, they should be left in the dark for a few days and thus encourage them to go up.

# Daffodils and Narcissi

The beauty of Daffodils and Narcissi is unquestioned and these flowers now form a leading feature in almost every Spring garden. Every gardener should realize the enormous amount of intense pleasure that can so easily be obtained from the cultivation of a batch of Daffodils or Narcissi.

**The indication of Daffodil and Narcissi.** The terms "Daffodil" and "Narcissi" are interchangeable, but there is a tendency to apply the name "Daffodil" to the varieties of which the trumpet or cup is as large or larger than the perianth or segments, while the name "Narcissi" is used for the varieties having small cups. The name "Narcissi," however, is correct for all the different types of Daffodils and Narcissi.

**Soil and its Treatment.** Daffodils and Narcissi will thrive in any well cultivated garden soil but prefer a good deep well drained loam. In preparing the ground for planting, dig deeply and if well rotted stable or cow manure is available this may advantageously be dug in 18 to 20 inches deep so as not to come into immediate contact with the bulbs. Never use fresh manure of any kind at planting time. On poor and dry sandy soils we recommend a dressing of sulphate of potash at a rate of about 1 oz. per square yard to be sprinkled over the surface of the ground after planting.

**Naturalizing Daffodils and Narcissi in Grass etc.** All Daffodils and Narcissi are suitable for naturalizing but in very heavy soils, preference should be given to stronger growing sorts i.e. Trumpet varieties and many Large Cupped sorts. They are all admirably adapted for grassy slopes and banks, where they should be freely planted. A splendid effect is obtained when Trumpet and other varieties are grouped separately.

**Growing Daffodils and Narcissi in the Cold Greenhouse or Indoors.** It is doubtful whether many people realize the amount of intense pleasure that is obtained from the cultivation of a few fine daffodils in a cold or very slightly heated greenhouse or in a sitting room. The flowers last well, often for two or three weeks and of course the earlier and later varieties provide for succession.

**Revision of the Classification of Daffodils.** In this catalog we have adopted the revised system for the new R.H.S. classification of Daffodils and Narcissi formally approved by the General Bulb Growers Society of Haarlem (Holland) and the Daffodil Societies of America, Canada, Australia, Tasmania and New Zealand.

The principal changes on comparing the old system with the new are as follows:

# Hyacinths

The best handpicked quality, choice bulbs, selected from healthy stocks, adopted for Bowls, Pots, Glasses and for Exhibition. We include only valuable varieties in our Collections.

## CULTURE IN POTS

Mix up a light rich compost of loam, leaf mould, well decayed cow manure and pure sand in equal portions, let this stand about one month before using. Hyacinths should be potted early in September for Christmas flowering and every fortnight after for succession.

In potting leave the top of the bulbs level with the surface of the soil, which should be moderately moist and be pressed firmly; place a little clean sand round the base of the bulb. When potted place on a bed of ashes and cover with cocoanut fibre refuse to a depth of about 5 inches; after three or four months, when well rooted, remove to the forcing house as required but care should always be taken that the bulbs are well rooted before beginning to force, as successful cultivation depends almost completely on this point. To keep the foliage dwarf and to assist the perfect coloring of the flowers, when growing, they should have occasionally a supply of liquid manure. Always use clean old pots or pans.

## HYACINTHS IN GLASSES

Fill the glass with water (rainwater preferred) so as almost to touch the base of the bulbs, a few pieces of charcoal should be put in the glass, as this is of service in keeping the water pure. The next proceeding is the simple one of placing the glasses in any dark room, cellar or cupboard, until the sprouts are about 3 inch. high, then they may be brought gradually to the full light. We only recommend Single varieties for this purpose. Although this system of culture is very simple, it is of the first importance that suitable bulbs should be obtained.

## OUTDOOR CULTURE

For successful cultivation in the open air, Hyacinths may be planted any time from September to December. September and October being the best months; they like a light rich soil, the ground should be sufficiently drained to prevent it becoming too retentive of moisture; plant the bulbs at equal distances apart in circles or straight lines and about 5 inches deep. Never plant the bulbs when the ground is wet. They require a little covering of straw or a thin layer of leaves during the winter to protect them from frost.

Those marked\* are easy forcing varieties and especially suitable for indoor culture.

# Choice Large-Flowered Crocus

When planted two or three inches apart in squares, the many flowers each bulb produces, will thickly cover the whole plot. In lawns and pleasure parks, planted in grass, they are extremely effective. They are also very fine for forcing but should be forced slowly in an airy situation. Crocuses should not be planted too deeply but only covered. We have discarded a great many varieties in favor of better ones.

## COLLECTIONS OF CROCUS

 Something very outstanding to have in bloom in pots during winter, is a collection of our choice large flowered Crocus. Plant thickly in pots immediately on receipt and plunge the pots in peat fibre or ashes. Crocuses cannot stand artificial heat and should be grown as cool as possible and given water freely when removed from the plunging bed. If the temperature is too high they will go blind. These collections can, of course, also be used for more liberal plantings in the garden.
